SGR300302

39314 bp DNA linear BCT 20-MAR-2002 Streptomyces griseus partial ORF1, canA gene, canC gene, canF gene, canT gene, canRA gene and canRB gene.
AJ300302

AJ300302.1 GI:12231153

ABC-transporter; aminotransferase; can RB gene; canA gene; canC

CC as to produce a secondary metabolite. The secondary metabolite has a CC benzene ring skeleton free from substitution at the para-position by a CC nitrogen-containing functional group, thereby enabling the production of CC a secondary metabolite with a benzene ring skeleton substituted at the CC para-position by a nitrogen-containing group. The transformant organism CC of the present invention has been produced by transferring a gene CC participating in the biosynthesis pathway from chorismic acid into para-position the present sequence is the coding sequence for 4-amino-4-deoxychorismic acid synthase (paph), from Streptomyces CC venezuelae. paph participates in the biosynthesis pathway from chorismic codi into p-aminophenylpyruvic acid, and so the paph gene can be used to produce the transformant of the present invention. The transformant can cc be used to produce metabolites for application in pharmaceuticals, CC veterinary drugs and agrochemicals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Percent Similarity:
